

Installing your new Elise / Exige diffuser from Diffflow.

Directions:

- 1)** Remove your existing diffuser by unfastening all of the screws.
- 2)** Save the clips on the front of the old diffuser. There should be 5 clips. You will place these clips on the front of your Diffflow diffuser in the same spots.
- 3)** Now, install the Diffflow diffuser. Use the screws and nuts that you just took off from your old diffuser.

Rubber Edging:

Our diffusers do not come with the same rubber edging that the factory put on your stock diffuser. It interrupts the airflow of the car. If you are interested in putting rubber edging on your Diffflow diffuser, you certainly can. Some of our customers use "door edge guard" or "door edge trim." You can buy it at any auto-parts store and simply put it on the fins/body of your Diffflow diffuser. You may want to use some black silicone to hold it in place.

Check out our diffuser add-ons on DIFFFLOW.COM

- Aero Plates (Fills in the undertray and diffuser area behind the rear wheels for better airflow)
- Cover Plates (Covers an existing exhaust hole cut-out if you have upgraded your exhaust)
